### 3.5 Dangerous substances

The applicant is required to submit a written declaration stating whether or not the fire stopping and fire sealing product contains dangerous substances according to European and national regulations, when and where relevant in the Member States of destination, and shall list these substances.

Hilti Corporation declare that product Hilti Firestop Bandage CFS-B is in compliance with Council Directive 76/769/EEC of 27th July 1976 on the approximation of the laws, regulations and administrative provisions of the Member States relating to restrictions on the marketing and use of certain dangerous substances and preparations (incl. all amendments and adaptations).

Confirmation has further been declared that all dangerous chemical substances  $\geq 1.0$  % w/w as well as all toxic, carcinogenic, toxic for reproduction and mutagenic chemical substances  $\geq 0.1$  % w/w (Status: 29. adaption – 2004/73/EG – of the EU directive 67/548/EEC - classification, packaging and labelling of dangerous substances) are stated in the Hilti Firestop Bandage CFS-B material safety data sheets (according to 91/155/EEC including amendments) and have been considered for the classification of the products according to the directive 1999/45/EG (classification of preparations, including amendments).

All dangerous chemical substances are below the classification limits of 67/548/EEC.

# 1 General Information Hilti Firestop Bandage CFS-B

## 1.1 Penetration seal and bandage installation

Pipes insulated with elastomeric combustible insulation (see Annex D) fire-stopped by wrapping the Hilti Firestop Bandage CFS-B twice around the insulation material.

Steel wire is utilised to hold the Hilti Firestop Bandage CFS-B together, positioned approximately in the first quarter measured from the flank.

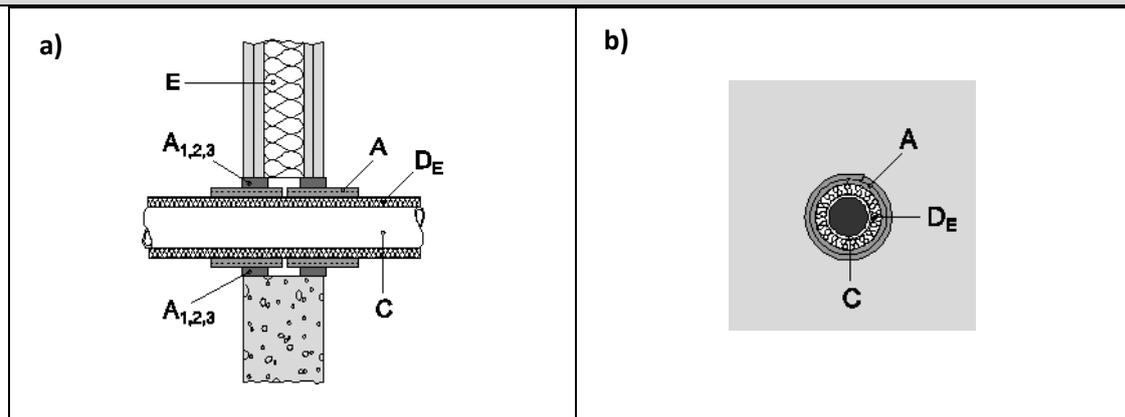

The Hilti Firestop Bandage CFS-B is mounted on both sides of the penetration.

The Hilti Firestop Bandage CFS-B is then pushed into the penetration in line with the designated marking shown on center of the Hilti Firestop Bandage CFS-B. In case of 100 mm thick walls the Hilti Firestop Bandage CFS-B was placed 50 mm inside and 75 mm outside the flexible wall.

### 1.1.1 Single penetration seal

Single insulated pipes running through the penetration are sealed utilising two layers of Hilti Firestop Bandage CFS-B.

Installation scheme of bandage  
a) side view      b) front view

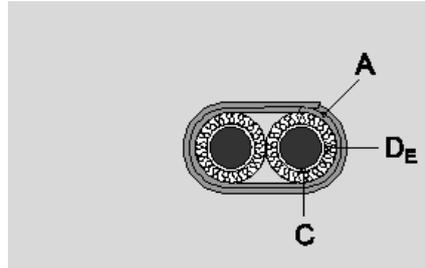

### 1.1.2 Bundled penetration

Small aluminium composite pipes ( $\leq \varnothing 16\text{mm}$ ) can be wrapped together in a double penetration with the Hilti Firestop Bandage CFS-B.

Hilti Firestop Bandage CFS-B is wrapped over both insulated pipes. Fixing and positioning of the bandage is as described above.

## 1.2 Pipe insulation with combustible and mineral wool insulation

Specific insulation thickness with corresponding classification class is shown at each section below.

### 1.2.1 Elastomeric combustible insulation

Pipes insulated with elastomeric butyl rubber based insulation material are varying in thickness from 7,7 mm up to 45 mm in configuration (CS) Continued Sustained. See also table of butyl rubber based insulation at appendix D ( p. 50).

Thicknesses display generally measured values and correspond to nominal values with tolerances.

Results were displayed considering E.2.7.5.2 and E.2.7.8.2 allowing interpolation of wall thickness and diameter between tested specimens and insulation thickness, respectively.

Metallic pipes from diameter 323.9mm on were insulated by a fixed thickness of 25mm elastomeric butyl rubber based insulation.

Metallic pipes were tested in C/U configuration, plastic and aluminum composite pipes in U/C configuration.

### 1.2.2 Glass-fiber mineral wool insulation

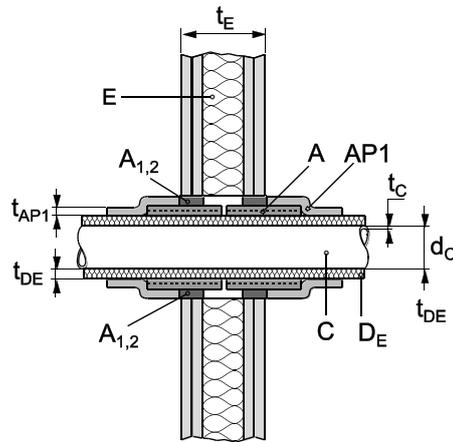

Instead of elastomeric butyl rubber based insulation glass-fiber mineral wool insulation (MW EN 14303-T4-ST(+))260-MV2, e.G. Isover ML-3) could be used for direct insulation of copper and steel pipes. Specific application please see corresponding chapters.

### 1.2.3 Mineral wool insulation

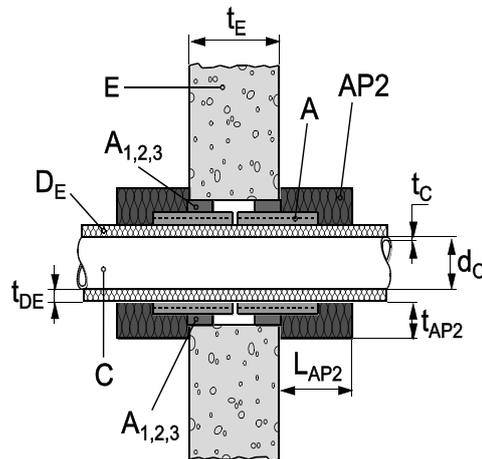

Insulation of mineral wool (melting point > 1000°C) has a density of at least 45kg/m<sup>3</sup> (e.g. Rockwool Klimarock, RS 800). Insulation thickness depends on pipe diameter. Local Interrupted (LI).

### 1.3 Additional Protection

Additional insulation material (AP) is utilised for some applications and comprises of the following:  
 AP1: Armaflex AF elastomeric material for thermal insulation, 19 mm thick and 300 mm in length (LI)  
 Local Interrupted

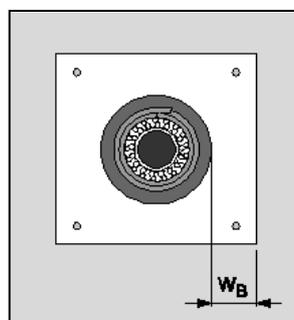

AP2: Mineral wool, Rockwool Klimarock, 40mm thick, 250 mm in length; density approximately 45kg/m<sup>3</sup>  
 (LI) Local Interrupted

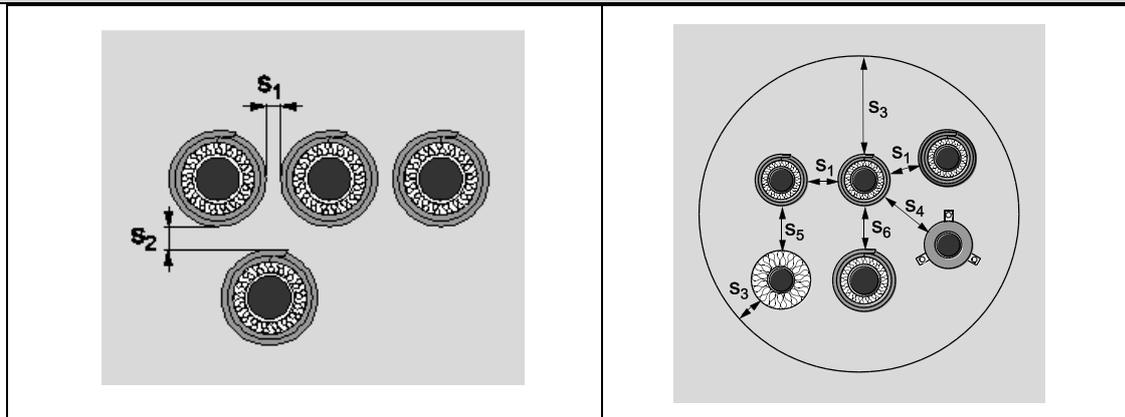

AP3: Beading / Outside Framing

Beading for flexible wall (100 mm) is applied by adding boards on both sides in two layers (2x12,5 mm Type F board) fixed with drywall screws. The resulting strips around the pipe whole are at least 50 mm in width ( $W_B$ ). Final penetration seal thickness is 150 mm.

## 1.4 Distance to insulated pipes and other fire-stopped services

Distance of services to each other – references see below 1.4.1 to 1.4.5  
These distances are valid for flexible, rigid wall and floor.

Sketches refer to round-shaped openings and their typical annular space

- 1.4.1 Distance to pipes firestopped by bandage in linear configuration -  $S_1$   
Distance is  $\geq 0$  mm to each other for insulated pipes wrapped by bandage CFS-B and in some cases to additional protection according classification.
- 1.4.2 Distance to pipes firestopped by bandage in cluster configuration –  $S_2$   
Distance is  $\geq 0$  mm to each other for insulated pipes wrapped by bandage CFS-B and in some cases to additional protection according classification.
- 1.4.3 Distances to seal edge -  $S_3$   
In round openings distance to seal edge are up to 40mm. In case where no gap is left between construction and bandage, smoke tightness has to be secured.
- 1.4.4 Distance to Hilti Firestop Collar CFS-C EL -  $S_4$   
Distance to Hilti Firestop Collar is shown to be zero. Please refer for detailed results the corresponding ETA 14/0085.
- 1.4.5 Distance to Mineral Wool Insulation -  $S_5$   
Insulated pipes fire-stopped with Hilti Firestop Bandage CFS-B are tested to have a distance of zero to adjacent mineral wool ( $\geq 1000$  C°, 45 kg/m<sup>3</sup>) insulated penetrations (see 1.2.2) or respectively to additional protection.
- 1.4.6 Distance to PE-HD / PE-Xa and PP-R pipes-  $S_6$   
Distance is  $\geq 0$  mm to each other for insulated pipes wrapped by bandage CFS-B and in some cases to additional protection according classification.

### 1.5 Annular Gap

In flexible and rigid wall Hilti Acrylic Firestop CFS-S ACR and gypsum is used to fill annular space. Mortar and gypsum is used in rigid walls and floors in full depth.  
Hilti Acrylic Firestop CFS-S ACR is applied for gaps from 0 mm -15 mm at about 25 mm in depth.  
Mortar and gypsum is used in rigid walls and floors, annular space is allowed from approximately 3 up to 40 mm.

### 1.6 Pipe Support

Pipes are supported in wall application at a distance of 400 mm.  
In floors first support was in 400 mm distance installed from surface.

## 2 Testing of fire resistance in different constructions

### 2.1 Flexible and rigid walls ( $\geq 100$ mm)

## 2.3 Floor

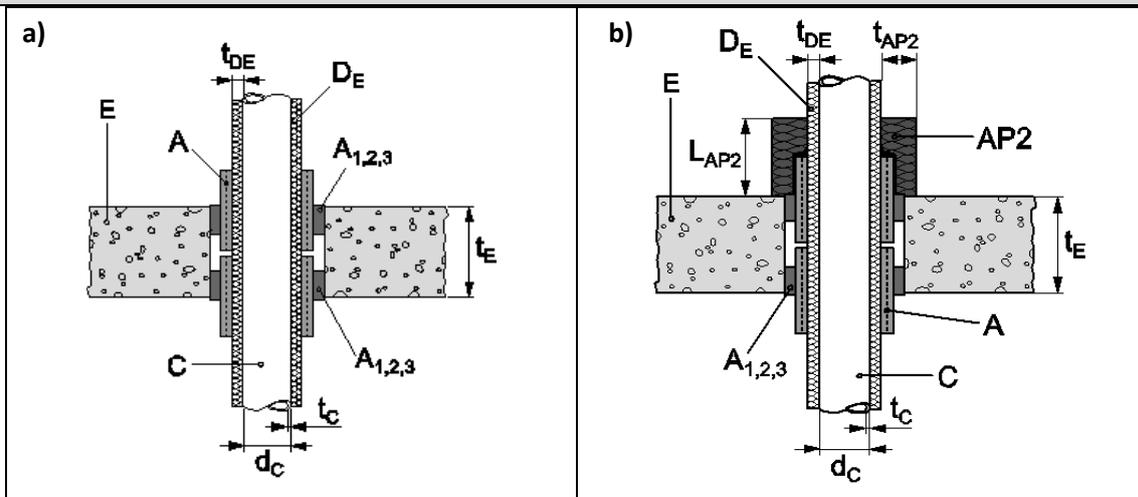

### 2.3.1 Set-up of floor ( $\geq 150 \text{ mm}$ )

The supporting construction is build according EN 1355-3:2009 of at least lightweight concrete slabs of a thickness of 150 mm and a density of  $550 \text{ kg/m}^3$ .

Installation variants of insulated pipes protected by Hilti Firestop Bandage CFS-B

Installation examples:

- Standard installation
- Installation with additional protection AP2
