# Safety caution

- Before use, read carefully through the “Safety caution” section to ensure correct operation.
- The important contents concerned to the safety are described in the “Safety cautions”. Be sure to keep them. For Indications and their meanings, see the following description.

## ■ Warning Indications on the Air Conditioner Unit

Warning indication	Description
 <div style="border: 1px solid black; padding: 2px;"> <b>WARNING</b>  <b>ELECTRICAL SHOCK HAZARD</b>            Disconnect all remote electric power supplies         </div>	<b>WARNING</b> <b>ELECTRICAL SHOCK HAZARD</b> Disconnect all remote electric power supplies before servicing.
 <div style="border: 1px solid black; padding: 2px;"> <b>WARNING</b>            Moving parts.            Do not operate unit with grille removed.         </div>	<b>WARNING</b> Moving parts. Do not operate unit with grille removed. Stop the unit before the servicing.
 <div style="border: 1px solid black; padding: 2px;"> <b>CAUTION</b>            High temperature parts.            You might get burned when removing this panel.         </div>	<b>CAUTION</b> High temperature parts. You might get burned when removing this panel.
 <div style="border: 1px solid black; padding: 2px;"> <b>CAUTION</b>            Do not touch the aluminum fins of the unit.            Doing so may result in injury.         </div>	<b>CAUTION</b> Do not touch the aluminium fins of the unit. Doing so may result in injury.
 <div style="border: 1px solid black; padding: 2px;"> <b>CAUTION</b>  <b>BURST HAZARD</b>            Open the service valves before the operation,         </div>	<b>CAUTION</b> <b>BURST HAZARD</b> Open the service valves before the operation, otherwise there might be the burst.
 <div style="border: 1px solid black; padding: 2px;"> <b>CAUTION</b>  <b>Do not climb onto the fan guard.</b>            Doing so may result in         </div>	<b>CAUTION</b> <b>Do not climb onto the fan guard.</b> Doing so may result in injury.

## ■ Explanation of indications

### WARNING

Indicates possibilities that a death or serious injury of personnel is caused by an incorrect handling.

### CAUTION

Indicates contents that an injury (\*1) or property damage (\*2) only may be caused when an incorrect work has been executed.

\*1: "Injury" means a hurt, a burn, or an electric shock which does not require hospitalization or a long-term going to the hospital.

\*2: "Property damage means an enlarged damage concerned to property, or breakage of materials.

- After installation work has finished, check there is no trouble by a test operation, and explain using method and maintenance method to the customers based on the Owner's Manual.  
Please ask the customers to keep this Installation Manual together with the Owner's Manual.

### WARNING

**Ask a shop or a professional dealer to install the air conditioner.**

If you will install by yourself, a fire, an electric shock, or water leak is caused.

**Take measures so that the refrigerant does not exceed the limit concentration even if it leaks when installing the air conditioner in a small room.**

For the measures not to exceed the limit of concentration, contact the dealer. If the refrigerant leaks and it exceeds the limit of concentration, an accident of oxygen shortage is caused.

**Install the air conditioner at a place which is satisfactorily bearable to weight.**

If strength is insufficient, the unit may fall down resulting in human injury.

**Perform a specified installation work against a strong wind such as typhoon or earthquake.**

If the air conditioner is imperfectly installed, an accident by falling or dropping may be caused.

**If refrigerant gas leaks during installation work, ventilate the room.**

If the leaked refrigerant gas approaches to fire, noxious gas may generate.

**After installation work, confirm that refrigerant gas does not leak.**

If refrigerant gas leaks in the room, and approaches to fire such as fan heater, stove or kitchen range, generation of noxious gas may be caused.

**Never recover refrigerant in the outdoor unit.**

Be sure to use a refrigerant recovery device to recover refrigerant in reinstallation or repair work.

Recovery of refrigerant in the outdoor unit is unavailable; otherwise a serious accident such as crack or human injury is caused.

**A person qualified for the electric work should deal with the electric construction conforming to the regulations of the local electric company and the Installation Manual. Be sure to use the exclusive circuit.**

If there is capacity shortage of the power supply circuit or incomplete installation, a fire or an electric shock is caused.

**For cabling, use the specified cables and connect them securely so that external force of cable does not transmit to the terminal connecting section.**

If connection or fixing is incomplete, a fire, etc. may be caused.

**Be sure to connect earth wire.**

Do not connect earth wire to gas pipe, water pipe, lightning rod, nor earth wire of telephone.

If grounding is incomplete, an electric shock is caused.

### CAUTION

**Do not install the air conditioner at a place where combustible gas may leak.**

If gas leaks and is collected at surrounding the unit, the production of fire may be caused.

**Be sure to attach an earth leakage breaker; otherwise an electric shock may be caused.**

**Using a torque wrench, tighten the flare nut in the specified method.**

If the flare nut is exceedingly tightened, the flare nut is broken and a refrigerant leakage may be caused after a long time has passed.

## WARNINGS ON REFRIGERANT LEAKAGE

### Check of Concentration Limit

**The room in which the air conditioner is to be installed requires a design that in the event of refrigerant gas leaking out, its concentration will not exceed a set limit.**

The refrigerant R410A which is used in the air conditioner is safe, without the toxicity or combustibility of ammonia, and is not restricted by laws to be imposed which protect the ozone layer. However, since it contains more than air, it poses the risk of suffocation if its concentration should rise excessively.

Suffocation from leakage of R410A is almost nonexistent. With the recent increase in the number of high concentration buildings, however, the installation of multi air conditioner systems is on the increase because of the need for effective use of floor space, individual control, energy conservation by curtailing heat and carrying power etc.

Most importantly, the multi air conditioner system is able to replenish a large amount of refrigerant compared with conventional individual air conditioners. If a single unit of the multi conditioner system is to be installed in a small room, select a suitable model and installation procedure so that if the refrigerant accidentally leaks out, its concentration does not reach the limit (and in the event of an emergency, measures can be made before injury can occur).

In a room where the concentration may exceed the limit, create an opening with adjacent rooms, or install mechanical ventilation combined with a gas leak detection device.

The concentration is as given below.

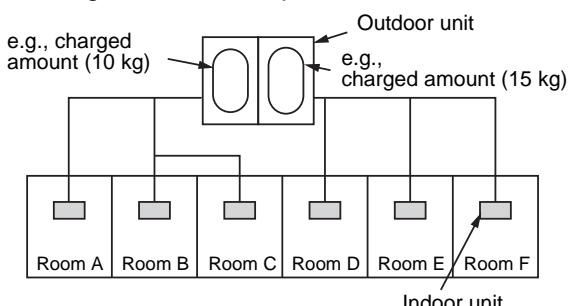

Total amount of refrigerant (kg)

$$\frac{\text{Min. volume of the indoor unit installed room (m}^3\text{)}}{\leq \text{Concentration limit (kg/m}^3\text{)}}$$

The concentration limit of R410A which is used in multi air conditioners is 0.3 kg/m<sup>3</sup>.

#### NOTE 1:

If there are 2 or more refrigerating systems in a single refrigerating device, the amounts of refrigerant should be as charged in each independent device.

For the amount of charge in this example:

The possible amount of leaked refrigerant gas in rooms A, B and C is 10 kg.

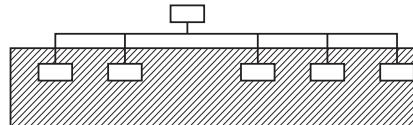

The possible amount of leaked refrigerant gas in rooms D, E and F is 15 kg.

### Important

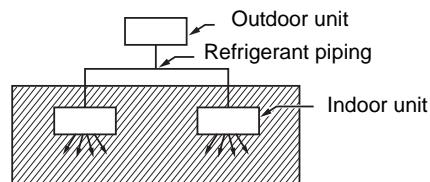

#### NOTE 2:

The standards for minimum room volume are as follows.

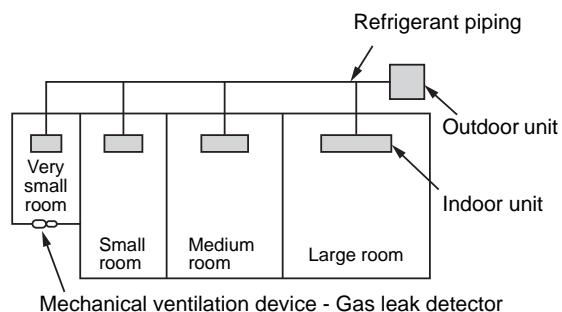

- (1) No partition (shaded portion)

- (2) When there is an effective opening with the adjacent room for ventilation of leaking refrigerant gas (opening without a door, or an opening 0.15 % or larger than the respective floor spaces at the top or bottom of the door).

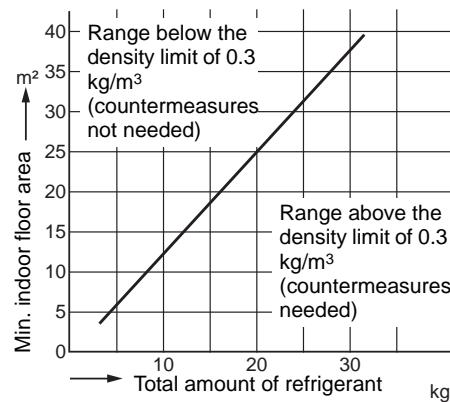

- (3) If an indoor unit is installed in each partitioned room and the refrigerant tubing is interconnected, the smallest room of course becomes the object. But when a mechanical ventilation is installed interlocked with a gas leakage detector in the smallest room where the density limit is exceeded, the volume of the next smallest room becomes the object.

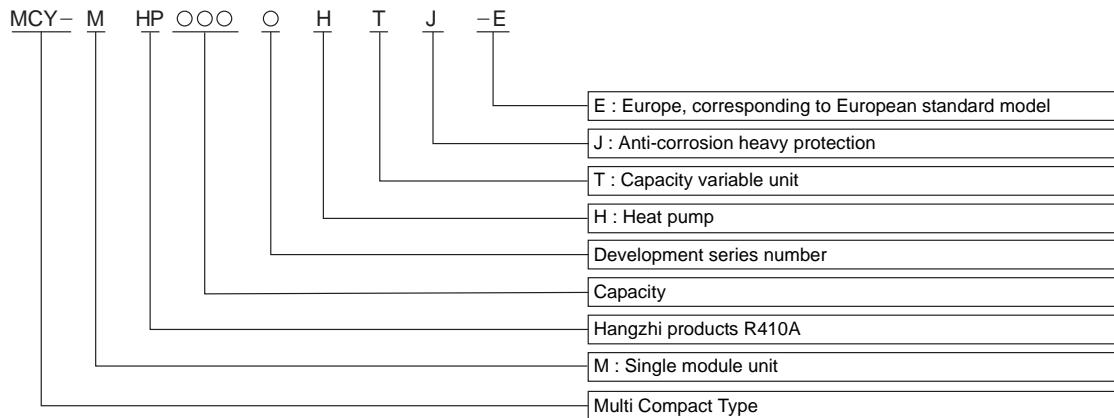

#### NOTE 3:

The minimum indoor floor area compared with the amount of refrigerant is roughly as follows: (When the ceiling is 2.7 m high)

## 1-1. Allocation standard of model name

## 2-1. Selection flow chart

## 2-2. Combination conditions for indoor unit and outdoor unit

Indoor unit can connect 80 % to 130 % of Outdoor unit capacity.

### 2-2-1. For indoor unit, the capacity code is decided for each capacity rank.

Capacity rank type	005(*1)	007	008	009	010	012	014	015	017	018	020	024	027	030	036	048	056	
Capacity code	Equivalent to HP	0.8	0.8	0.9	1.0	1.1	1.25	1.5	1.7	1.85	2.0	2.25	2.5	3.0	3.2	4.0	5.0	6.0

**NOTE:**

Capacity rank : Correspondence to Btu/h. Capacity code : Correspondence to Horsepower.

\*1 : Capacity code of 005 type is the same as 007 type.

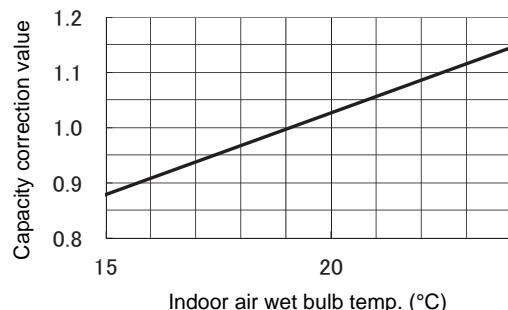

### 2-2-2. For outdoor unit, maximum No. of connectable indoor units and total capacity code of indoor units are decided.

Outdoor unit	Capacity code of outdoor unit	No. of connectable indoor units	Total capacity code of indoor units
MCY-MHP0404HT*	4	2 to 6	3.2 to 5.2
MCY-MHP0504HT*	5	2 to 6	4.0 to 6.5
MCY-MHP0604HT*	6	2 to 6	4.8 to 7.8

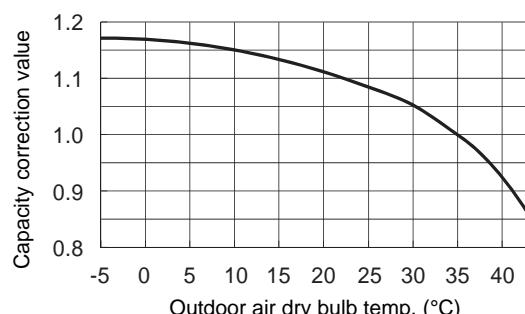

## 2-3. Cooling / heating capacity characteristics

### 2-3-1. Correction charts for cooling capacity calculation

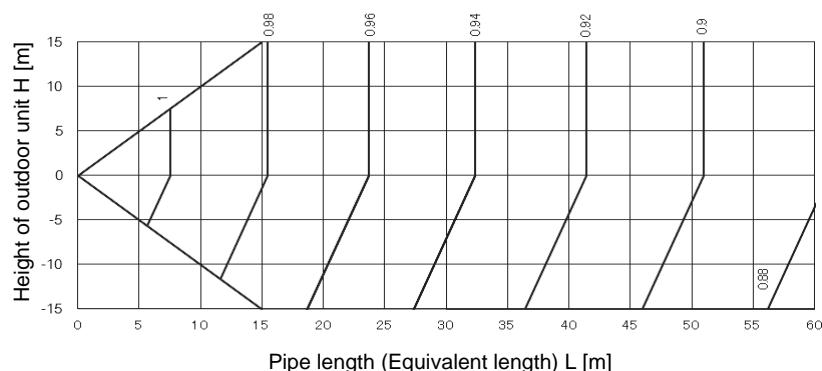

#### [1] Capacity correction value vs. indoor air wet bulb temperature

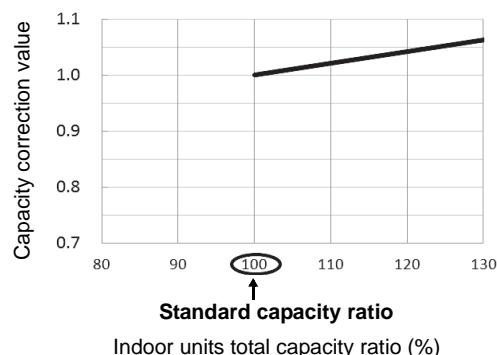

#### [2] Capacity correction value vs. outdoor air dry bulb temperature

#### [3] Capacity correction value vs. connecting pipe length and lift difference between indoor and outdoor units

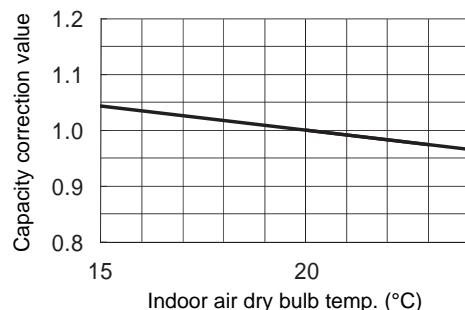

#### [4]\* Correction of outdoor unit diversity

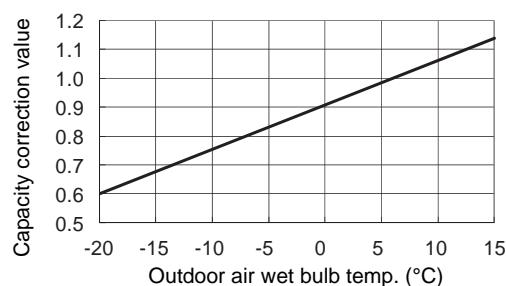

\* : Coefficient to use for correction of outdoor unit capacity when total capacity of the indoor units are not equal to the outdoor unit capacity.

### 2-3-2. Correction charts for heating capacity calculation

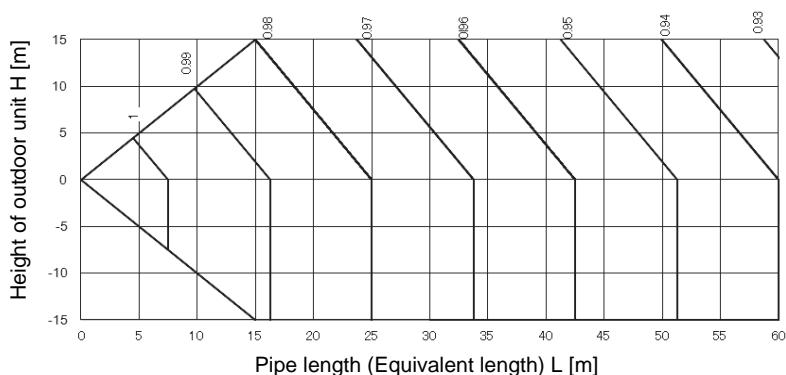

#### [1] Capacity correction value vs. indoor air dry bulb temperature

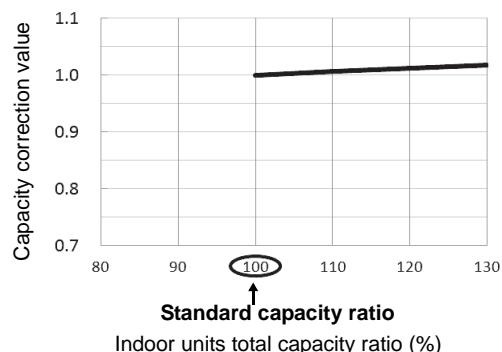

#### [2] Capacity correction value vs. outdoor air wet bulb temperature

#### [3] Capacity correction value vs. connecting pipe length and lift difference between indoor and outdoor units

#### [4]\* Correction of outdoor unit diversity

\* : Coefficient to use for correction of outdoor unit capacity when total capacity of the indoor units are not equal to the outdoor unit capacity.

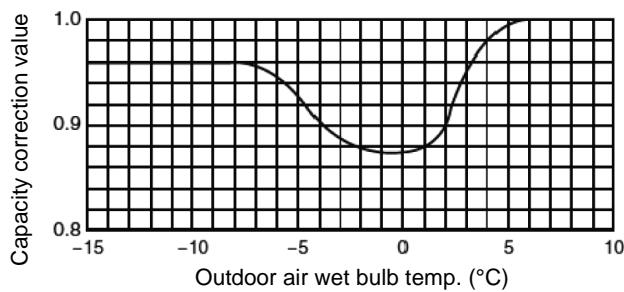

### 2-3-3. Capacity correction in case of frost on the outdoor heat exchanger in heating

Correct the heating capacity when frost was found on the outdoor heat exchanger.

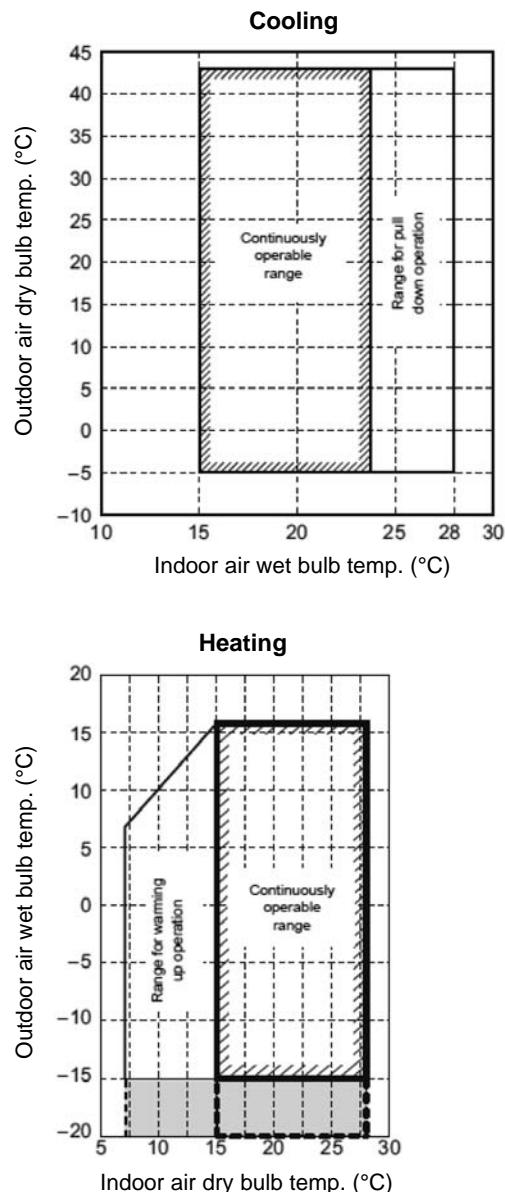

Heating capacity = Capacity after correction of outdoor unit x Correction value of capacity resulted from frost

(Capacity after correction of outdoor unit: Heating capacity calculated in the above item 2.)

#### [5] capacity correction in case of frost on the outdoor heat exchanger

## 2-4. Operational temperature range

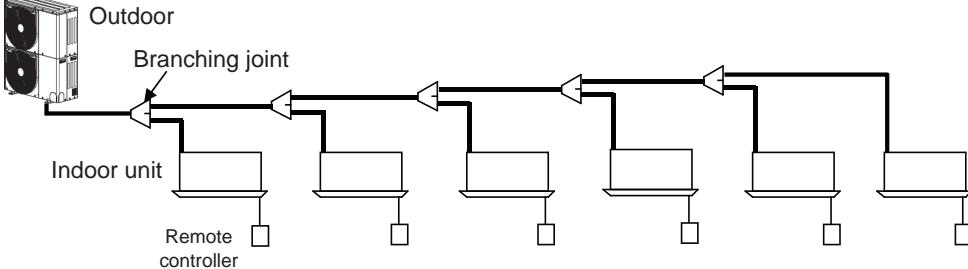

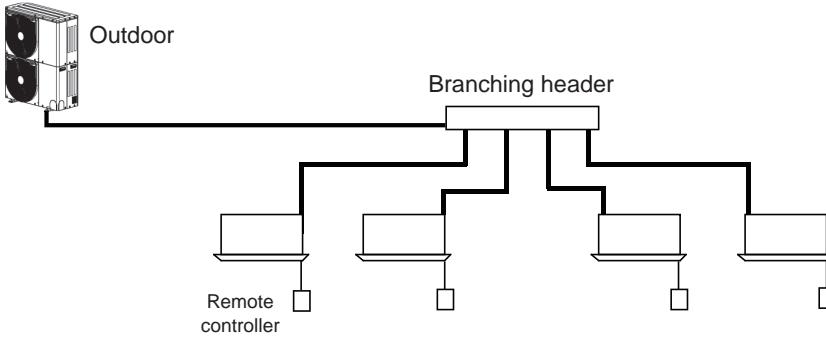

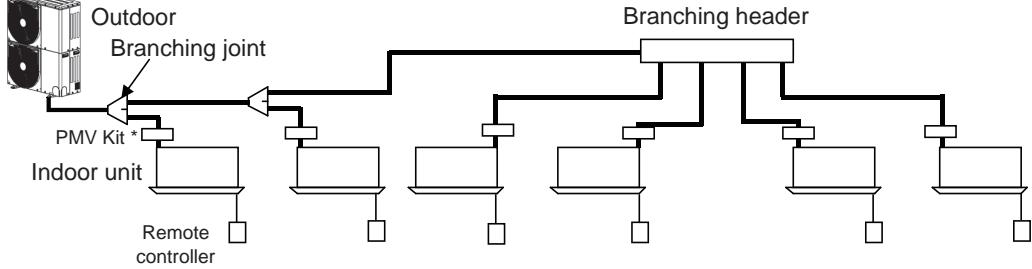

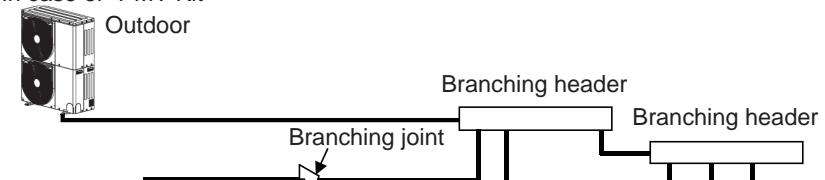

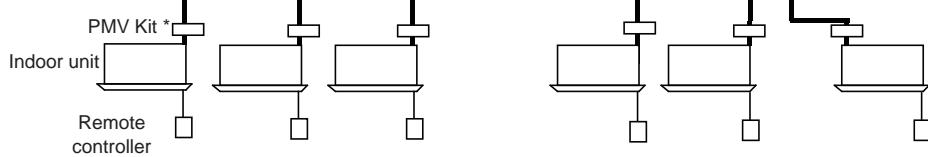

The unit will operate down to an outdoor temperature of -20 °C, however considerable performance decrease will be expected below -15 °C. Therefore please consider installation location/surroundings and system design when expected to operate between -15 °C and -20 °C.

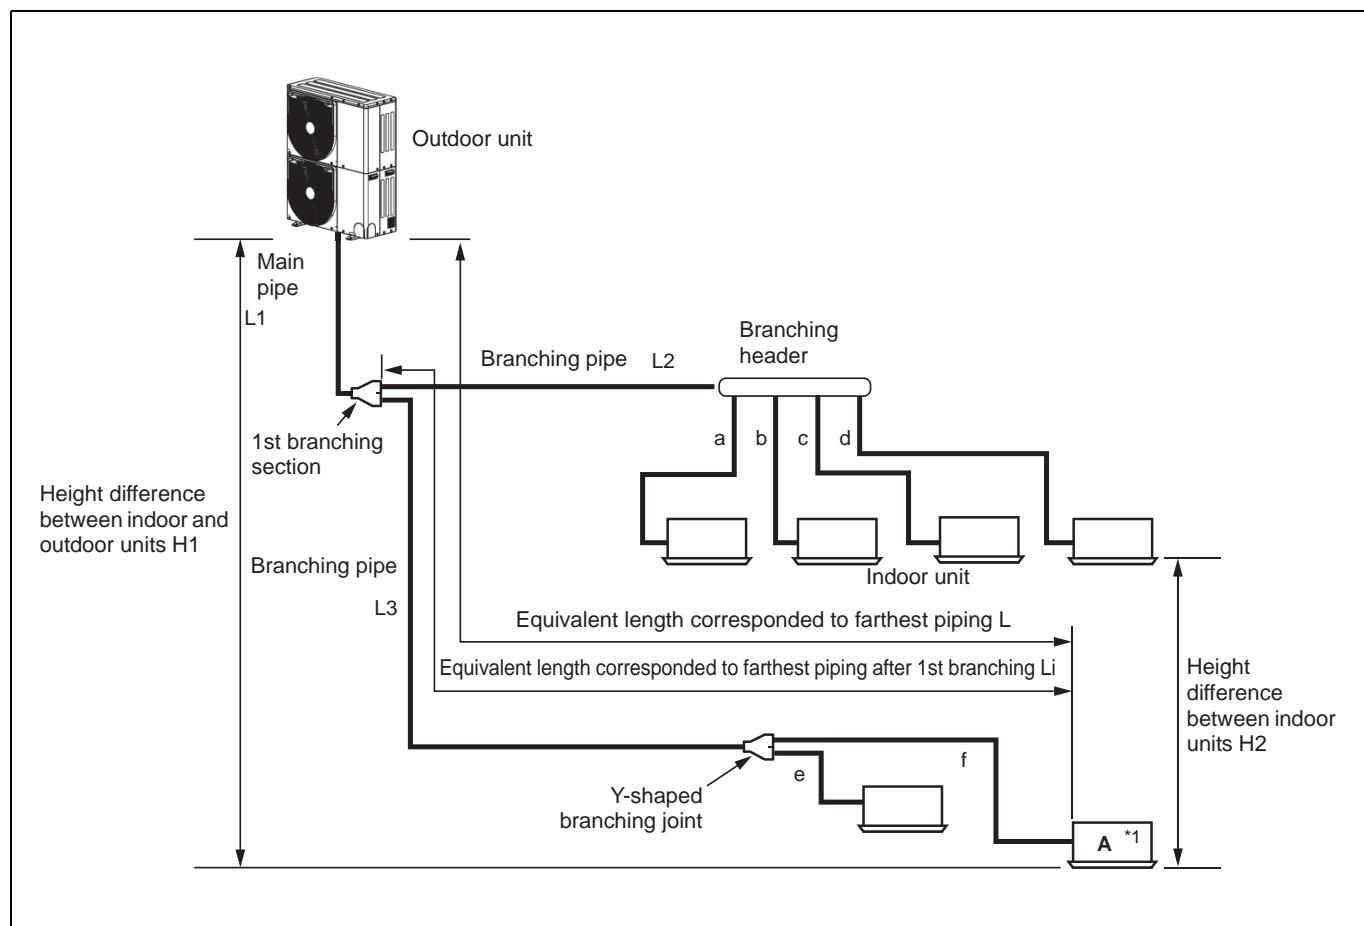

### 3-1. Free branching system

- [1] Line branching system
- [2] Header branching system
- [3] Header branching system after line branching
- [4] Line branching system after header branching
- [5] Header branching system after header branching

The above five branching systems enable to dramatically increase the flexibility of refrigerant piping design.

Line branching system	
Header branching system	
Header branching system	* In case of "PMV Kit" 
Line branching system after header branching	* In case of "PMV Kit" 
Header branching system after header branching	

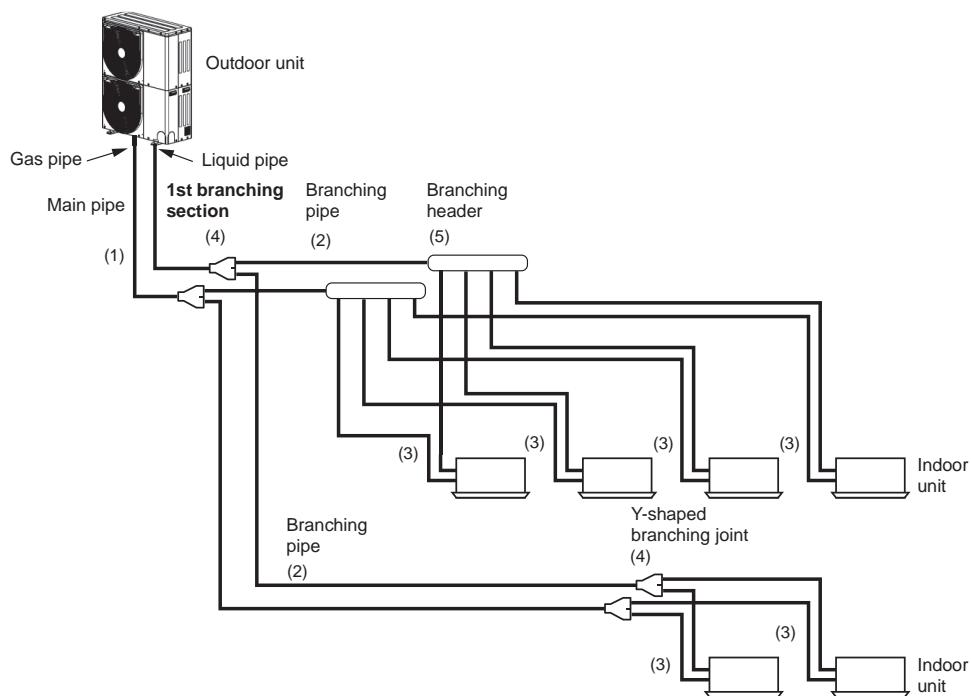

### 3-2. Allowable length / height difference of refrigerant piping

		Allowable value		Piping section
Pipe Length	Total extension of pipe (Liquid pipe, real length)	90 m	$L_1 + L_2 + L_3 + a + b + c + d + e + f$	
	Furthest piping length $L$ (*1)	Real length Equivalent length	50 m 60 m	$L_1 + L_3 + f$
	Max. real length of main pipe	30 m	L1	
	Max. real length of furthest piping from 1st branching L <sub>i</sub> (*1)	20 m	L3 + f	
Height Difference	Max. real length of indoor unit connecting pipe	10 m	a, b, c, d, e, f	
	Height between indoor and outdoor units H1	Upper outdoor unit Lower outdoor unit	15 m 15 m	— —
	Height between indoor units H2		10 m	—

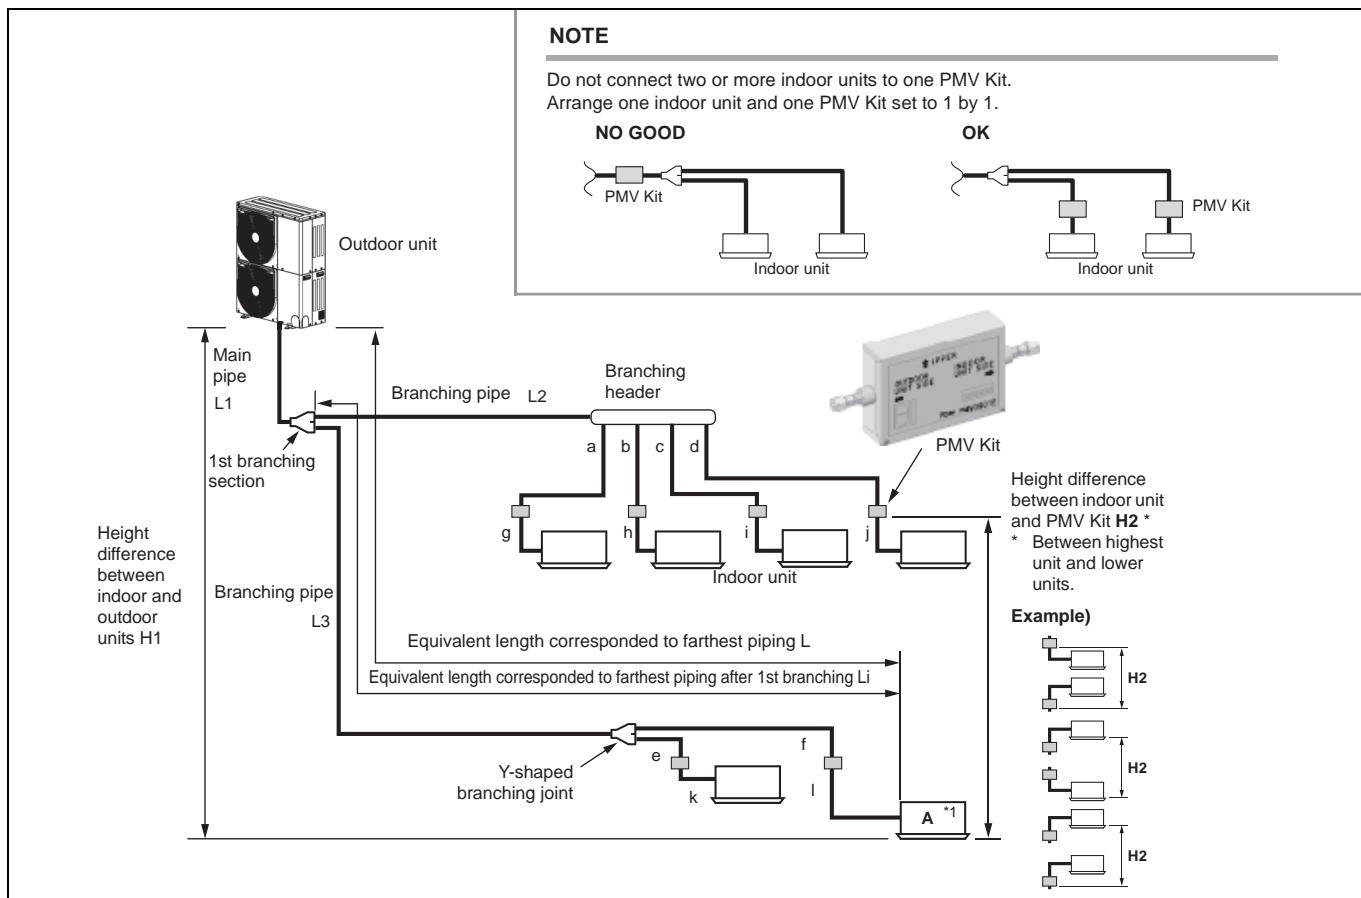

\*1 Furthest indoor unit from 1st branch to be named "A"

### 3-3. Selection of refrigerant piping

No.	Piping parts	Name	Selection of pipe size				Remarks																				
(1)	Outdoor unit ↓ 1st branching section	Main pipe	<b>Size of main pipe</b>				Same as connecting pipe size of the outdoor unit.																				
			<table border="1"> <thead> <tr> <th>Outdoor unit capacity type</th> <th>Gas pipe</th> <th>Liquid pipe</th> <th></th> </tr> </thead> <tbody> <tr> <td>0404 type</td> <td>15.88</td> <td>9.52</td> <td></td> </tr> <tr> <td>0504 type</td> <td>15.88</td> <td>9.52</td> <td></td> </tr> <tr> <td>0604 type</td> <td>19.05</td> <td>9.52</td> <td></td> </tr> </tbody> </table>					Outdoor unit capacity type	Gas pipe	Liquid pipe		0404 type	15.88	9.52		0504 type	15.88	9.52		0604 type	19.05	9.52

### 3-6. Charging requirement with additional refrigerant

After finishing vacuuming, exchange the vacuum pump with a refrigerant canister and start additional charging of refrigerant.

#### Refrigerant amount charged in factory

Outdoor unit type	MHP0404	MHP0504	MHP0604
Charging amount (kg)	3.9	3.9	3.9

#### Calculation of additional refrigerant charge amount

Refrigerant charge amount factory default does not include the refrigerant for pipes at the local site.

For refrigerant to be charged in pipes at the local site, calculate the amount and charge it additionally.

#### NOTE

When the additional refrigerant amount indicates minus as the result of calculation, it is not necessary to subtract any refrigerant.

#### Calculating formula

$$\text{Additional refrigerant charge amount at local site (kg)} = \text{Real length of liquid pipe} \times \text{Additional refrigerant charge amount per 1 m liquid pipe (Table 1)} + \text{Corrective amount of refrigerant depending on the indoor units (Table 2)} + \text{Compensation by outdoor HP (Table 3)}$$

Table 1

Liquid pipe diameter (mm)	6.4	9.5
Additional refrigerant amount /1 m liquid pipe (kg/m)	0.025	0.055

Table2

Compensation by outdoor HP (kg)	-1.6	-1.6	-1.6	-1.6

## 4-1. General

- The appliance shall be installed in accordance with national wiring regulations.  
Capacity shortages of the power circuit or an incomplete installation may cause an electric shock or fire.
- Perform wiring of power supply complying with the rules and regulations of the local electric company.
- Never connect AC voltage power to the control wiring terminal block (U1,U2,U3,U4); otherwise the unit may break down.
- Be sure that electric wiring does not come into contact with high-temperature parts of piping; otherwise the coating of cables may melt and cause an accident.
- Locate wiring system for the control and refrigerant piping system in the same line.
- Do not turn on the power supply of the indoor units until vacuuming of the refrigerant pipe has finished.
- For the wiring of power to indoor units and that between indoor and outdoor units, follow the instructions in the installation manual of each indoor unit.

## 4-2. Electrical wiring design

Determine the wire size for the indoor unit according to the number of connected indoor units downstream.

## 4-3. Outdoor unit power supply

### Electrical characteristics

Model name	Normal Voltage (V-Ph-Hz)	Voltage Range		Compressor	Fan Motor	Power Supply	
		Min	Max	kW	kW	MCA	MOCP
MCY-MHP0404HT-E	230 - 1 - 50	198	264	3.75	0.100 × 2	23.5	32.0
MCY-MHP0504HT-E	230 - 1 - 50	198	264	3.75	0.100 × 2	26.5	32.0
MCY-MHP0604HT-E	230 - 1 - 50	198	264	3.75	0.100 × 2	28.0	32.0

MCA : Maximum Circuit Amps

MOCP : Maximum Overcurrent Protection (Amps)

## 4-4. Indoor unit power supply

### • Wiring size

**Must be independent from the outdoor unit power supply**

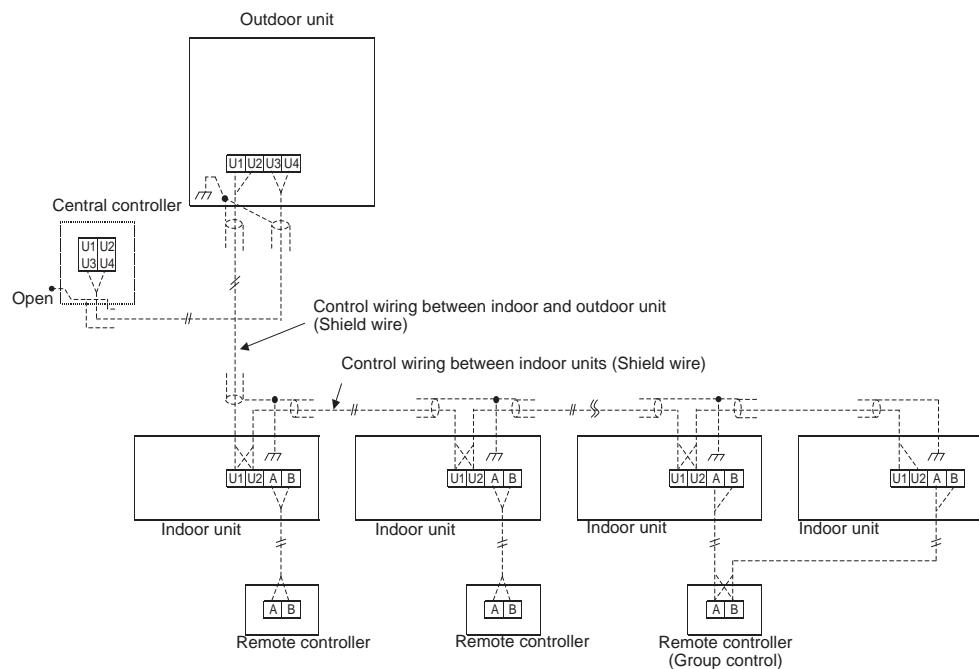

Model	Item	Power supply wiring			
		Wire size			
All models of indoor units		2.0 mm <sup>2</sup> (AWG#14)	Max. 20 m	3.5 mm <sup>2</sup> (AWG#12)	Max. 50 m

### NOTE:

The above connecting lengths stated in the table, indicate the length from the isolator to the outdoor unit. When the power supply of the indoor units are connected in parallel, it is assumed that no more than a 2 % voltage drop will occur. If the connecting length is to exceed the stated lengths, select a suitable wire in accordance with the local wiring standards.

## 4-5. Design of control wiring

### 4-5-1. Summary of control wiring

Control wiring and central control wiring use 2-core non-polarity wires.

Use 2-core shield wires to prevent noise trouble.

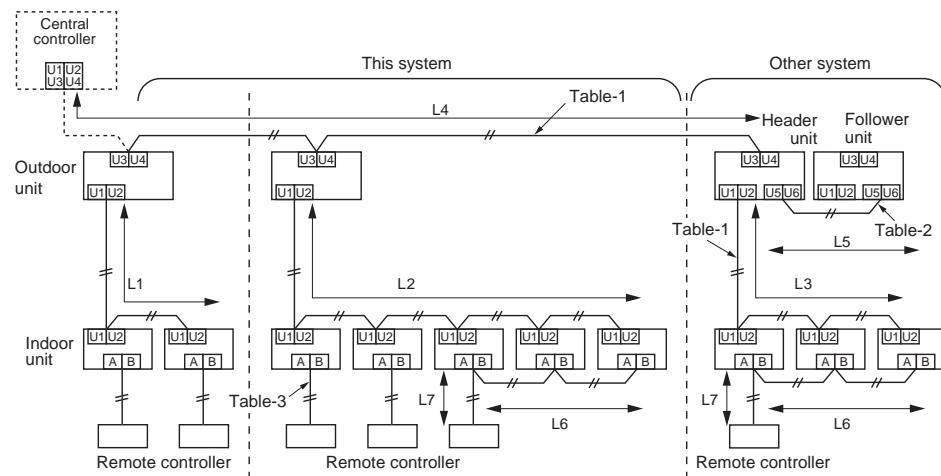

In this case, for the system grounding, close (connect) the end of shield wires, and isolate the end of terminal.

Use 2-core non-polarity wire for remote controller. (A, B terminals)

Use 2-core non-polarity wire for wiring of group control. (A, B terminals)

#### 4-5-2. Restriction of control wiring

Keep the rule of below tables about size and length of Control wiring.

**Table-1 Control wiring between indoor and outdoor units (L1, L2, L3), Central control wiring (L4)**

Wiring	2-core, non-polarity
Type	Shield wire
Size/Length <sup>*1</sup>	1.25 mm <sup>2</sup> : Up to 1000 m 2.0 mm <sup>2</sup> : Up to 2000 m

(\*1): Total of control wiring length for all refrigerant circuits (L1 + L2 + L3 + L4)

**Table-2 Control wiring between outdoor units (L5) (Other system)**

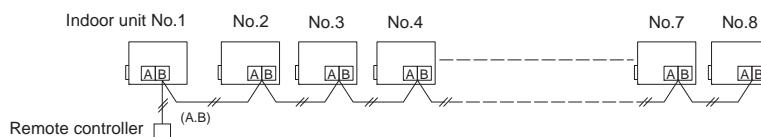

Wiring	2-core, non-polarity
Type	Shield wire
Size/Length	1.25 mm <sup>2</sup> to 2.0 mm <sup>2</sup> Up to 100 m (L5)

**Table-3 Remote controller wiring (L6, L7)**

Wire	2-core
Size	0.5 mm <sup>2</sup> to 2.0 mm <sup>2</sup>
Length	Up to 500 m (L6 + L7) Up to 400 m with of wireless remote controller in group control. Up to 200 m total length of control wiring between indoor units (L6)

#### 4-5-3. Group control through a remote controller

Group control of multiple indoor units (8 units) through a single remote controller

## 5-1. Specifications

Outdoor unit model name			MCY-MHP0404HT-E	MCY-MHP0504HT-E	MCY-MHP0604HT-E

Compressor	Type		Hermetic twin rotary compressor	Hermetic twin rotary compressor	Hermetic twin rotary compressor
	Motor output	kW	3.75	3.75	3.75
Fan unit	Fan		Propeller fan (Quantity 2)	Propeller fan (Quantity 2)	Propeller fan (Quantity 2)
	Motor output	W	100 + 100	100 + 100	100 + 100
	Air volume	m³/h	6,030	6,210	6,410
Heat exchanger			Finned tube	Finned tube	Finned tube
Refrigerant R410A (Charged refrigerant amount (kg)) (*3)			3.9	3.9	3.9
Protective devices			(*4)		
Electrical specifications	Unit	MCA (*5)	A 23.5	26.5	28.0
		MOCP (*6)	A 32.0	32.0	32.0
Refrigerant piping	Connecting port diameter	Gas side (main pipe)	mm 15.9	15.9	19.1
		Liquid side (main pipe)	mm 9.5	9.5	9.5
	Connecting method	Gas side		Flare	Flare
		Liquid side		Flare	Flare
Max. No. of connected indoor units			6	6	6
Sound pressure level	Cooling	dB(A)	50	51	52
	Heating	dB(A)	52	54	55
Operation temperature range	Cooling	CDB	-5 to 43	-5 to 43	-5 to 43
	Heating	CWB	-20 to 15	-20 to 15	-20 to 15

(\*1) Rated conditions Cooling : Indoor 27 degC Dry Bulb / 19 degC Wet Bulb, Outdoor 35 degC Dry Bulb.

Heating : Indoor 20 degC Dry Bulb, Outdoor 7 degC Dry Bulb / 6 degC Wet Bulb.

The standard pipe means that equivalent piping length of 7.5 m and standard 0 m piping height difference.

(\*2) The source voltage must not fluctuate more than ±10%.

(\*3) The amount does not consider extra piping length and indoor unit type.

Refrigerant must be added on site in accordance with the actual piping length and indoor unit type.

(\*4) Discharge temp. sensor / Suction temp. sensor / High-pressure sensor / Low-pressure sensor / Compressor case thermostat / PC board fuse

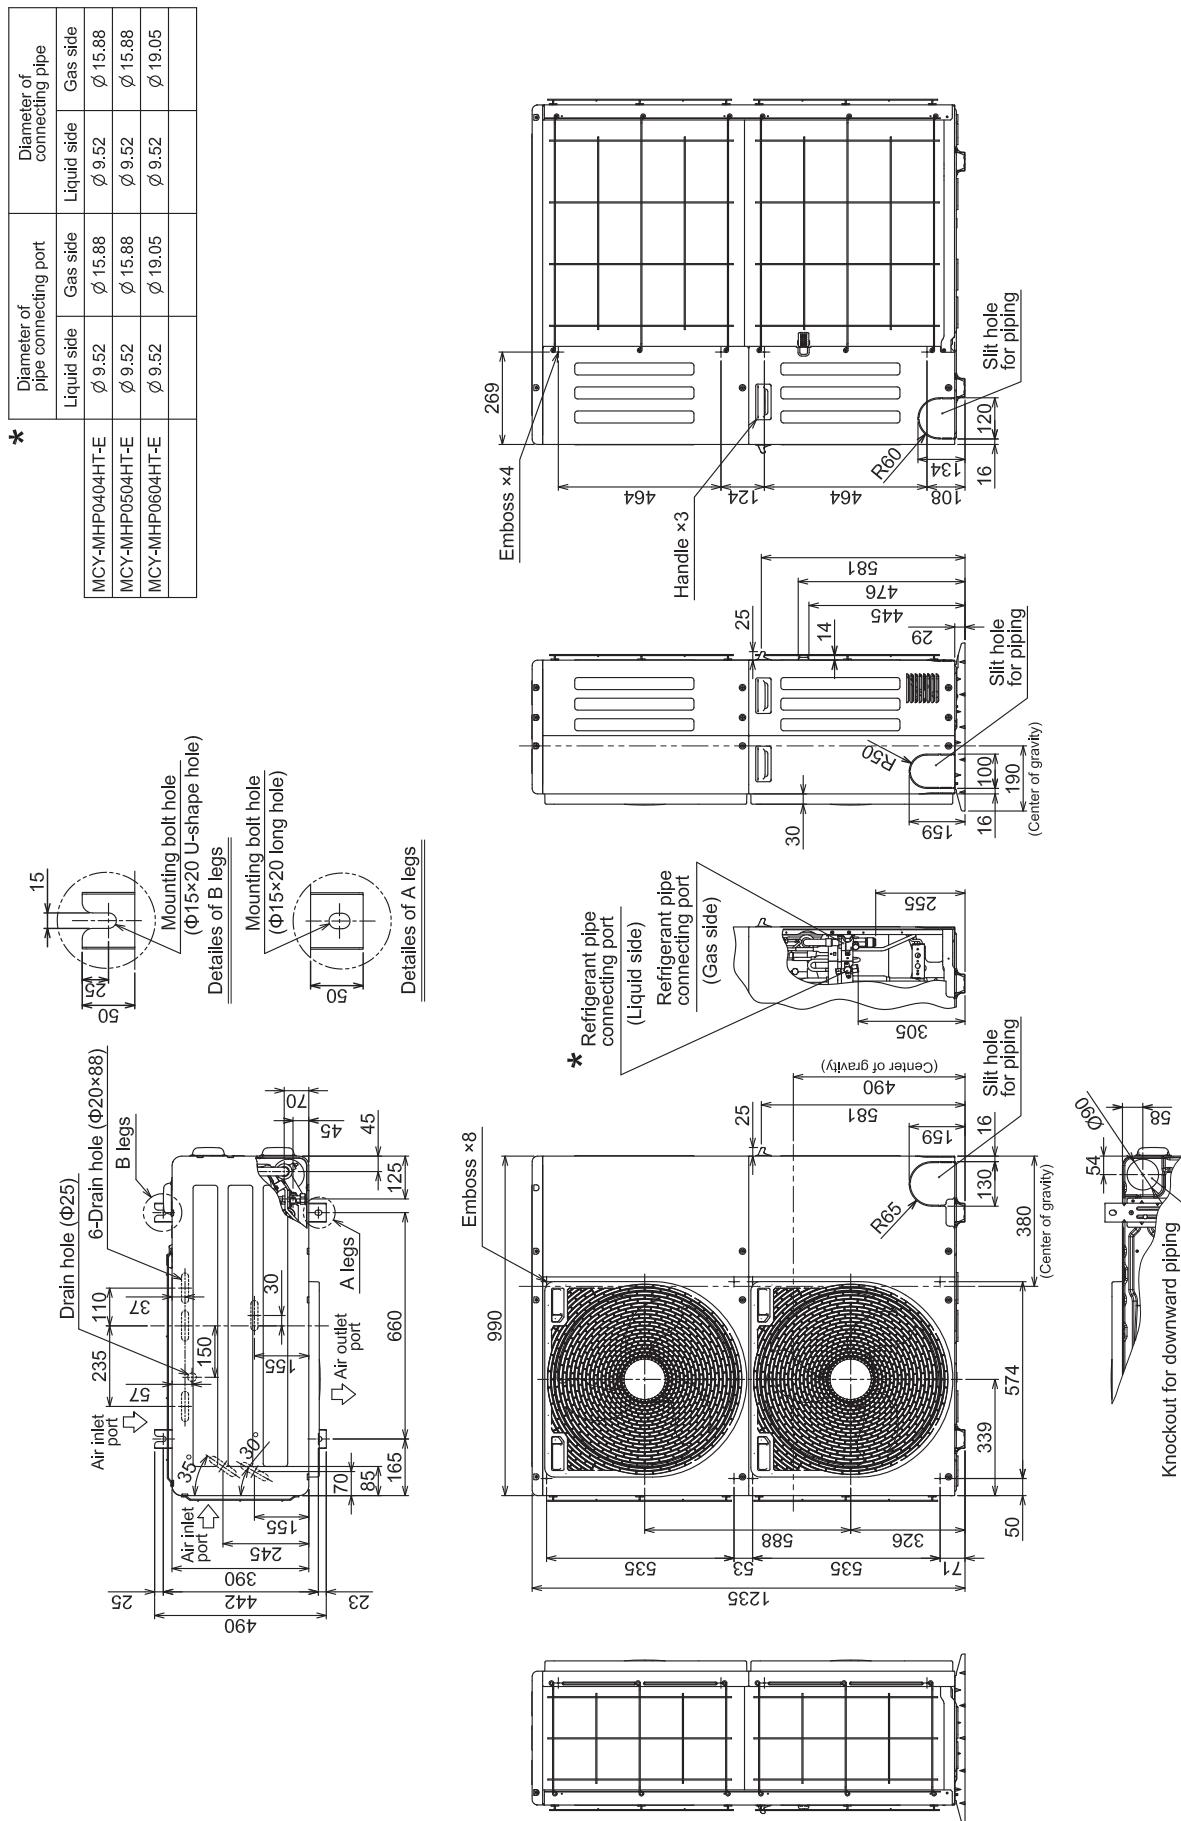

(\*5) Select wire size base on the large value of MCA.

MCA : Minimum Circuit Amps

(\*6) MOCP Maximum Overcurrent Protection (Amps)

(6)	Circuit breaker (Earth leakage breaker)
(7)	Pull box
(8)	PMV Kit (option)

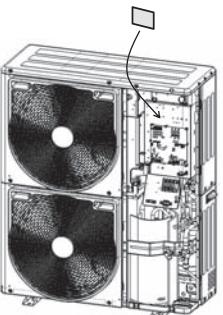

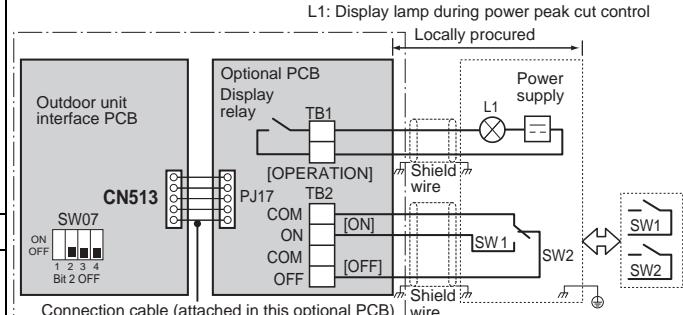

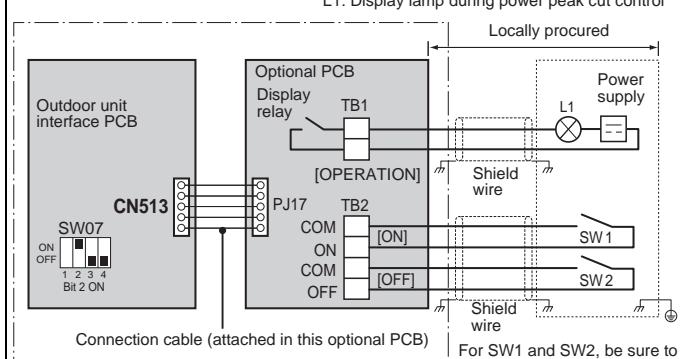

W1	Control wiring between indoor and outdoor units.
W2	Control wiring between indoor units.

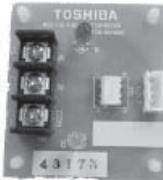

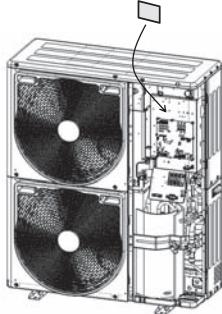

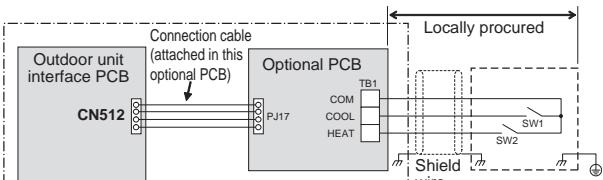

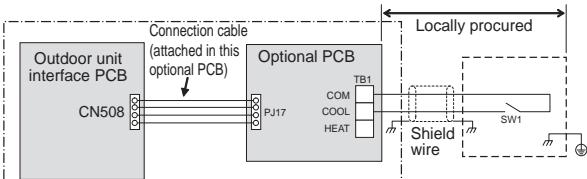

**(Note)**

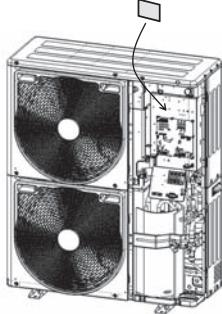

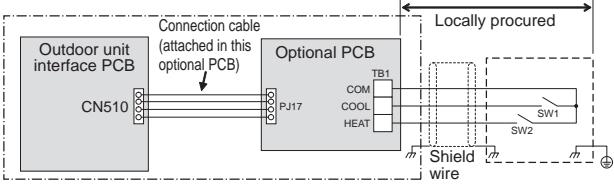

1. When perform a central control, connect the wire of CN01 in CN02. (Factory default : No connection)
2. Connection of shield wire must be connected. (Connected to all connecting sections in each Indoor unit)
3. Group control
4. Select the power supply wiring and fuse of outdoor/indoor units according to each models specification. Perform wiring of power supply complying with the rules and regulations of the local electric company.
5. For the control wires connecting indoor units, outdoor units, and between indoor and outdoor units, use 2-core and non-polarity shield wires.
6. As for details, see the wiring diagram of indoor/outdoor unit.

TC : Total Capacity

PI : Power Input

Indoor air temperature conditions : 20.0 °C dry-bulb

All indoor unit operation

## 5-9. Sound pressure level data

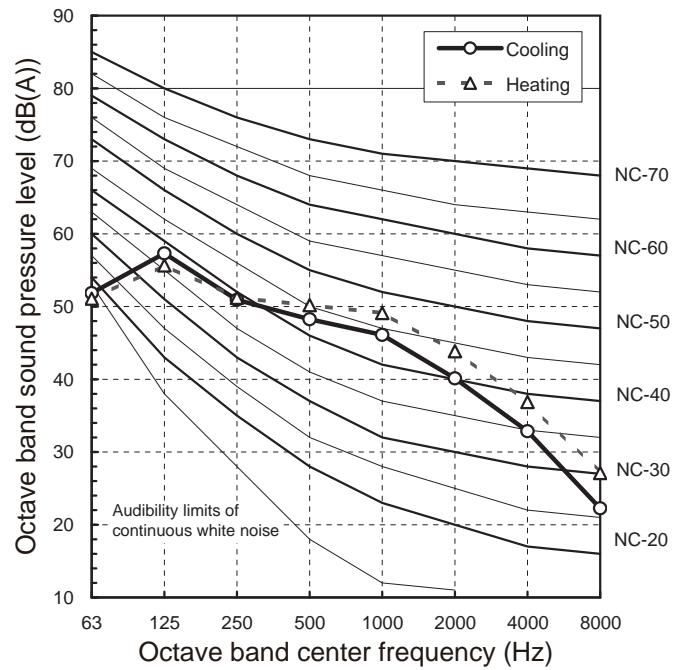

**MCY-MHP0404HT-E**

Sound pressure level (dB(A))	Cooling	Heating
	50	52

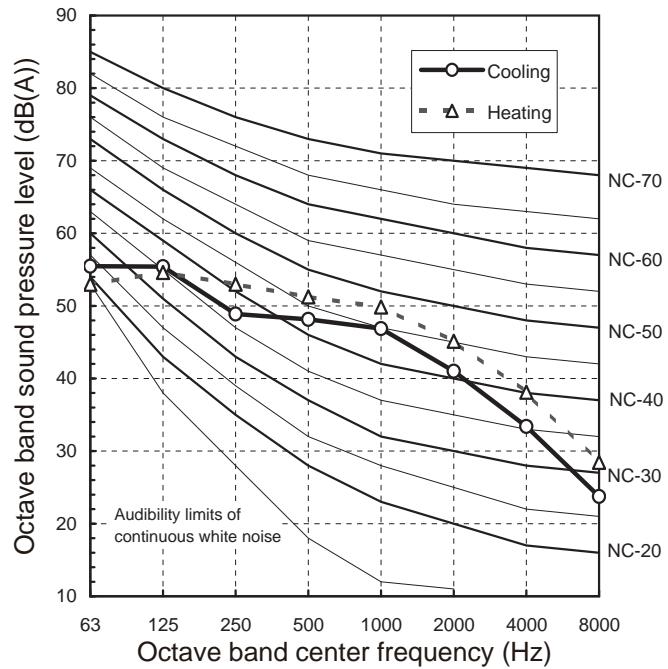

**MCY-MHP0504HT-E**

Sound pressure level (dB(A))	Cooling	Heating
	51	54

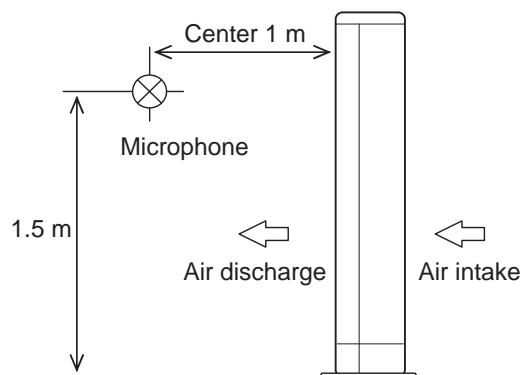

**MCY-MHP0604HT-E**

Sound pressure level (dB(A))	Cooling	Heating
	52	55

### [Measuring location]

### [Conditions]

#### Cooling

Outdoor temperature: 35 °CDB, 24 °CWB  
Indoor air temperature: 27 °CDB, 19 °CWB

#### Heating

Outdoor temperature: 7 °CDB, 6 °CWB  
Indoor air temperature: 20 °CDB

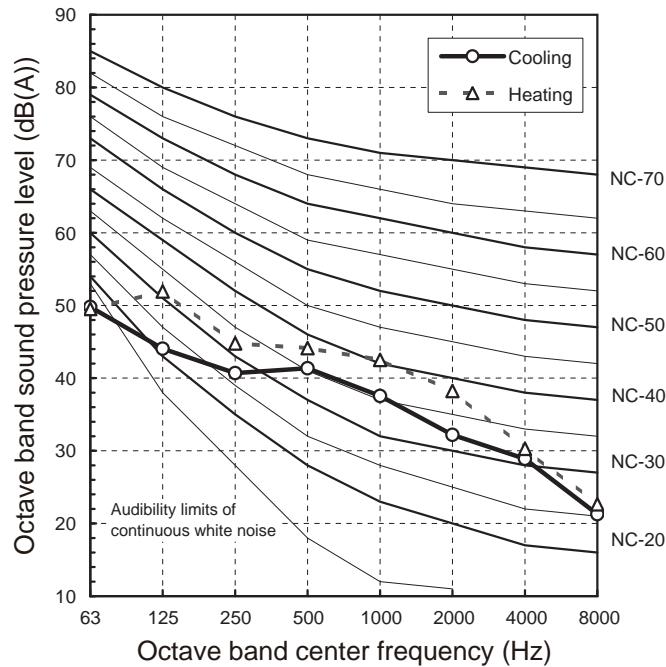

This sound pressure level are measured in an anechoic chamber in accordance.

## 5 Outdoor unit

- Night operation (sound reduction) control

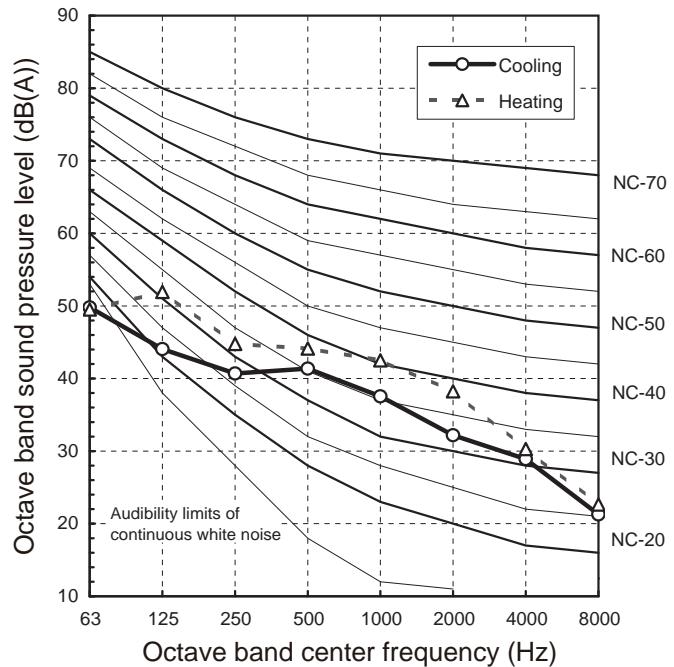

**MCY-MHP0404HT-E**

Sound pressure level (dB(A))	Cooling	Heating
	47	50

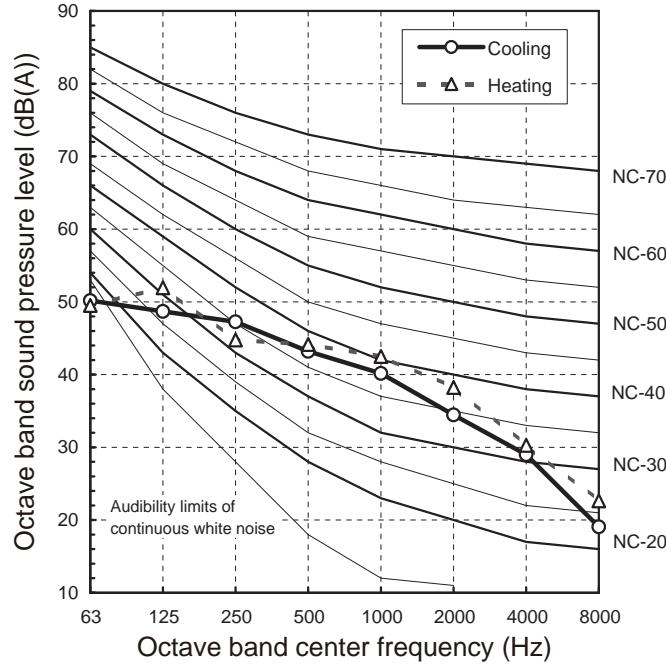

**MCY-MHP0504HT-E**

Sound pressure level (dB(A))	Cooling	Heating
	47	50

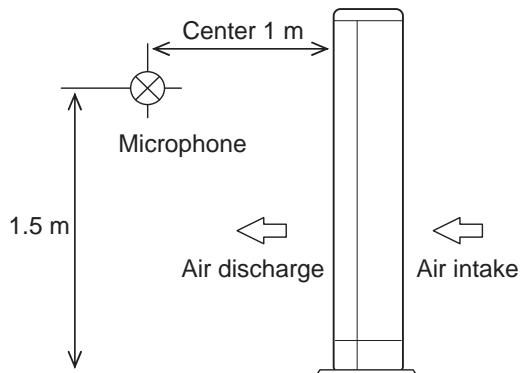

**MCY-MHP0604HT-E**

Sound pressure level (dB(A))	Cooling	Heating
	48	50

### [Measuring location]

### [Conditions]

#### Cooling

Outdoor temperature: 25 °CDB, 16 °CWB  
Indoor air temperature: 27 °CDB, 19 °CWB

#### Heating

Outdoor temperature: 7 °CDB, 6 °CWB  
Indoor air temperature: 20 °CDB

This sound pressure level are measured in an anechoic chamber in accordance.

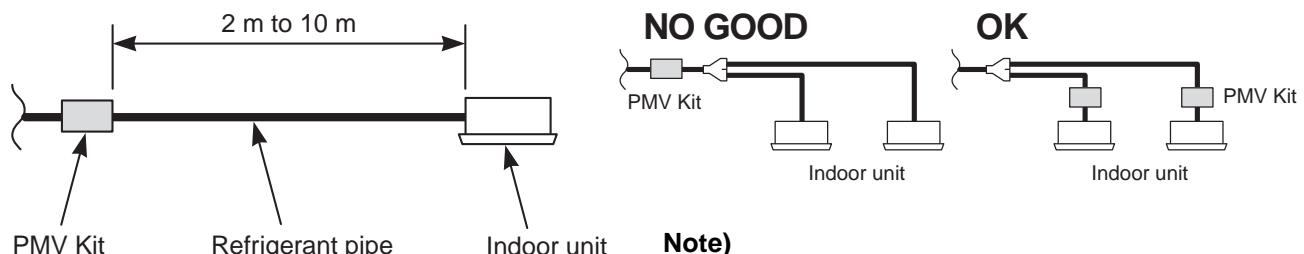

## 5-10. PMV Kit

PMV-Kit (RBM-PMV0362E/RBM-PMV0902E) shall be required for quieter place application as an optional to reduce refrigerant sound especially in oil retrieval control or in transient operation as start up.

### 5-10-1. Selection

Model name	Indoor unit capacity type	Diameter of refrigerant pipe
RBM-PMV0362E	005 to 014 type	ø6.4
RBM-PMV0902E	015 to 018 type	ø6.4
	020 to 027 type	ø9.5

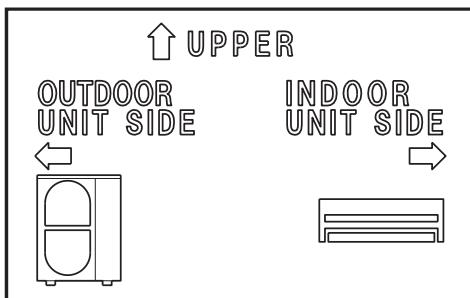

#### Allowable length of refrigerant piping

#### Note)

Do not connect two or more indoor units to one PMV Kit. Arrange one indoor unit and one PMV Kit set to 1 by 1.

#### Label

- Connecting direction of refrigerant pipe  
When connecting pipes, be careful of direction of the main unit. Be sure to install the main unit so that [↑UPPER] mark in the label directs upward. For connection of the refrigerant pipes, follow the arrow mark in the label and connect pipes after confirming directions of indoor unit and outdoor unit.

#### Piping material and dimensions

Model name	Indoor unit capacity type	Diameter of refrigerant pipe	Notes
RBM-PMV0362E	005 to 014 type	ø6.4	
RBM-PMV0902E	015 to 018 type	ø6.4	
	020 to 027 type	ø9.5	

#### CAUTION

When connecting ø9.5 refrigerant pipes, be sure to insert a seal pipe between PMV main unit and the joint. If the seal pipe is not inserted, refrigerant leakage is caused.

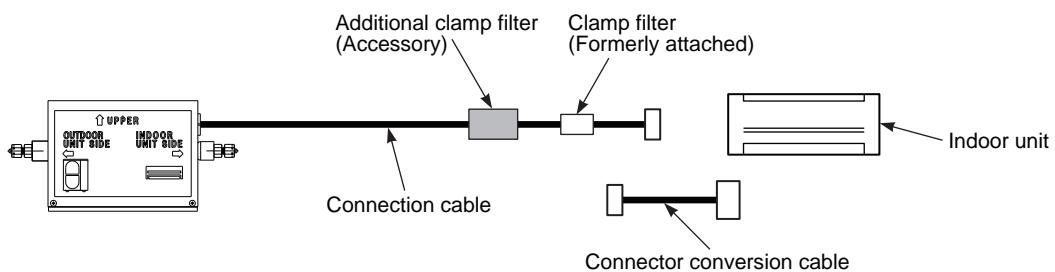

### 5-10-2. Wiring connections

For this product, the connector conversion cable and additional clamp filter (Accessory) are used according to the indoor unit to be connected.

For the corresponding unit and how to use the conversion cable and clamp filter, refer to the following description.

**The connector conversion cable is not used for the indoor unit, but the additional clamp filter is used.**

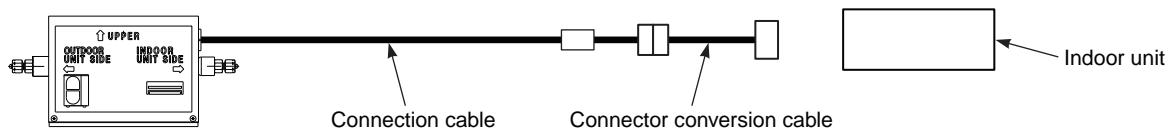

High Wall Type 3 series (MMK-AP\*\*\*3H\*)

- Mount the clamp filter (Accessory) to the connection wire (11 m) out of the PMV kit main body. Refer to the mounting method.
- Remove the connector conversion cable mounted to the connection cable out of the PMV kit main body and then connect it.

**The additional clamp filter is not used for the indoor unit, but the connector conversion cable is used.**

Indoor unit except above indoor units

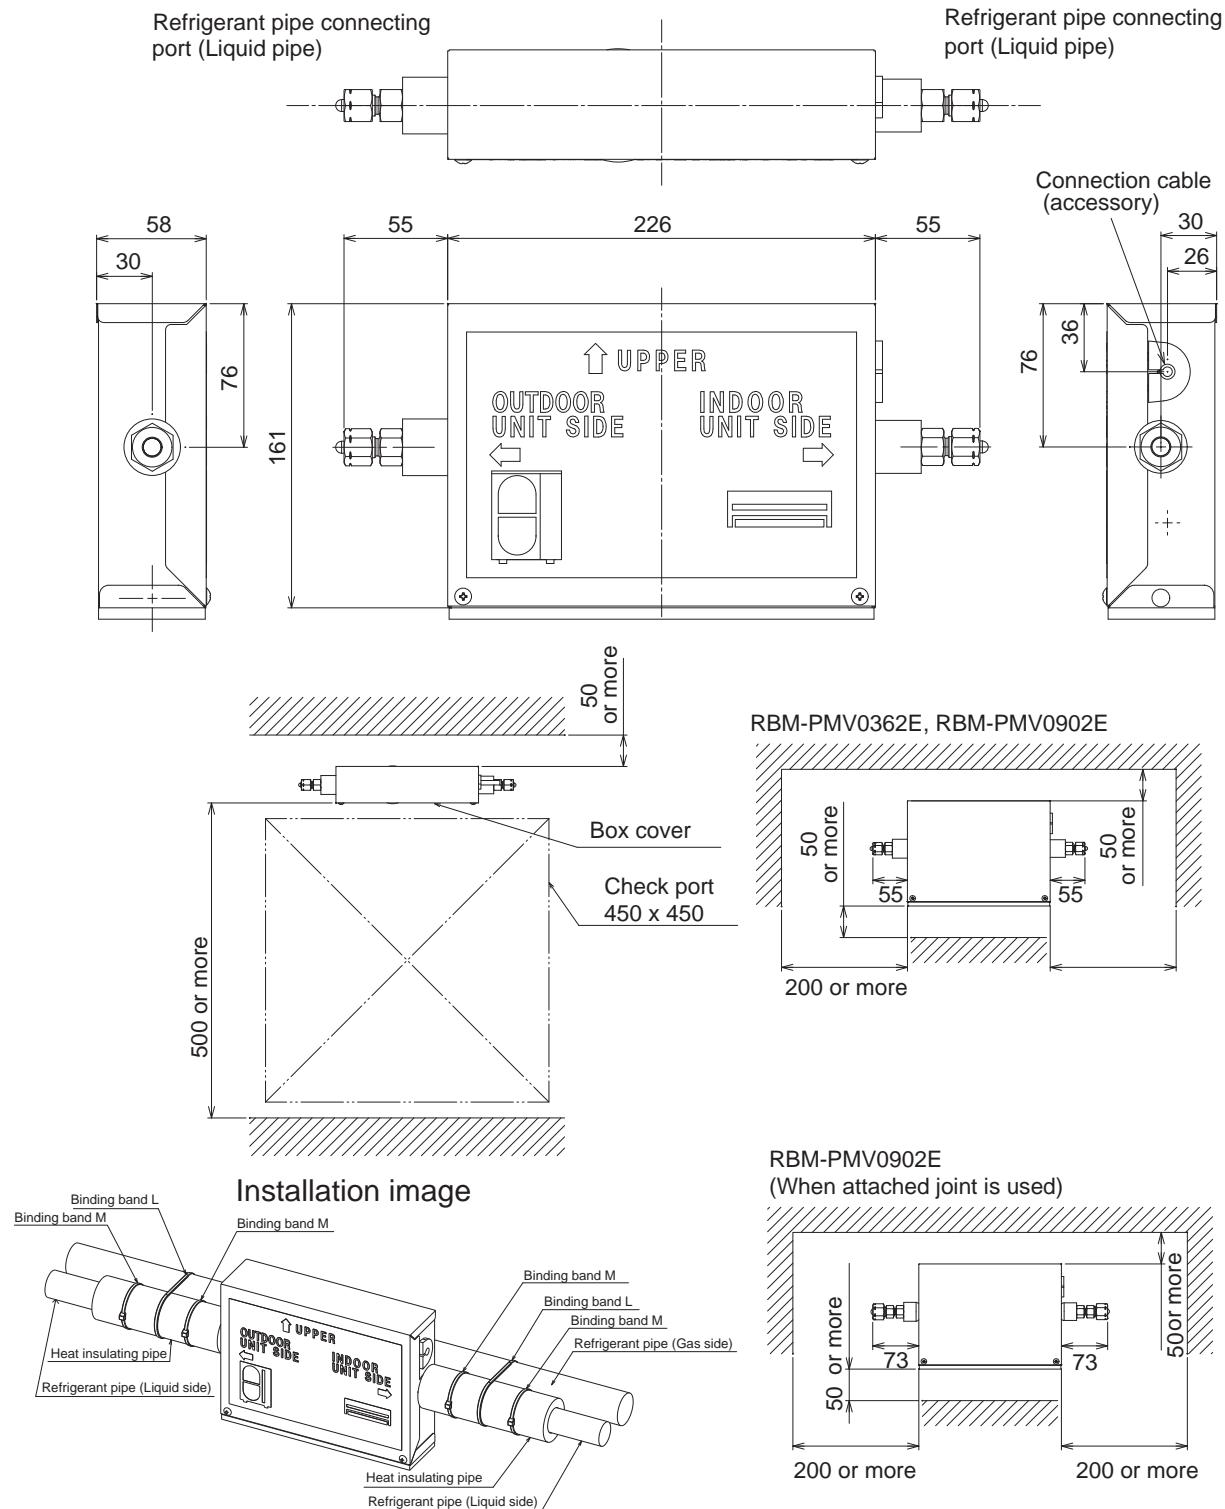

## 5 Outdoor unit

### 5-10-3. Dimensional drawing

#### • PMV Kit

RBM-PMV0362E, RBM-PMV0902E

Note: All dimensions are in mm.
